Release v3.0.3

Guide

1.1 Installation

libcomxml requires Python >= 2.6

To install from the PyPI:

```
$ pip install -U libcomxml
```

Alternatively, you can install libcomxml from source.

You can clone the public repo:

```
$ git clone https://github.com/gisce/libComXML.git
```

Or download one of the following:

- [tarball](#)
- [zipball](#)

Once you have the source, you can install it into your site-packages with

```
$ python setup.py install
```

1.2 API Reference

1.2.1 Core

```
class libcomxml.core.Field(name, value=None, attributes=None, rep=None)  
Base Field class
```

Parameters

- **name** – the name of the field super(Cabecera, self).__init__(name, root)
- **value** – the value of the field
- **attributes** – a dict with optional field attributes
- **rep** – function that returns the representation of ‘value’

```
get_value()  
    self.__value getter
```

```
set_value (value)
    self.__value setter

value
    self.__value getter

class libcomxml.core.Model (name)
    Base Model class

feed (vals)
    Populates the vals dictionary to the value property of the fields.

        Parameters vals – a dictionary with key:value pairs for this model's fields.

sorted_fields ()
    Returns a sorted list of the model fields' names.

class libcomxml.core.XmlField (name, value=None, parent=None, attributes=None, rep=None,
                                namespace=None)
    Field with XML capabilities

        Parameters

            • name – the name of the field super(Cabecera, self).__init__(name, root)
            • value – the value of the field
            • parent – the parent node
            • attributes – a dict with optional field attributes
            • rep – function that returns the representation of ‘value’
            • namespace – namespace associated with element

element (parent=None)
    Constructs the lxml.Element that represents the field

        Parameters parent – an etree Element to be used as parent for this one

class libcomxml.core.XmlModel (name, root, drop_empty=True)
    Model with XML capabilities

This class is intended to be subclassed and used as follows:

build_tree ()
    Bulids the tree with all the fields converted to Elements
```

|

`libcomxml.core`, 3

B

`build_tree()` (`libcomxml.core.XmlModel` method), [4](#)

E

`element()` (`libcomxml.core.XmlField` method), [4](#)

F

`feed()` (`libcomxml.core.Model` method), [4](#)

`Field` (class in `libcomxml.core`), [3](#)

G

`get_value()` (`libcomxml.core.Field` method), [3](#)

L

`libcomxml.core` (module), [3](#)

M

`Model` (class in `libcomxml.core`), [4](#)

S

`set_value()` (`libcomxml.core.Field` method), [3](#)

`sorted_fields()` (`libcomxml.core.Model` method), [4](#)

V

`value` (`libcomxml.core.Field` attribute), [4](#)

X

`XmlField` (class in `libcomxml.core`), [4](#)

`XmlModel` (class in `libcomxml.core`), [4](#)
